Responses to Comments and Suggestions

May 2008

1. Could you replace the metal curtain hooks on the shower stalls with plastic ones? It might make it easier to open and close curtains. Thanks for considering this.

Thank you for the suggestion. We use metal because plastic would not hold up to the high usage.

2. Please put a wall clock in the towel exchange room. I suppose earlier it was there.

Thank you for the comment. We have now replaced that clock.

3. Thanks for the new shower heads at Mabel Lee. We all love them. (signed—The Water Aerobics Ladies)

Thank you for the comment. We are glad they work well.

4. The fan in the cadence (biking) room is broken. The dial won't turn on. Can you please fix it?

Thank you for the comment. The fan has been repaired.

5. How many monitors are you going to put in? You have six on the wall up stairs and now you put one on every treadmill. You are totally missing the reason most people work out. It is to get away from the programs on TV and get in shape. It used to be a time for a peaceful, calm relaxed run. Now you have this big black screen in my face. Will someone get a clue?

Thanks for your input. Based on past surveys and participant interviews this is the direction we were guided. The indoor track is available and we have also added campus routes for walking and running outside (please go to the Campus Rec website for a printable copy). In addition, there are bikes around the indoor track as well as equipment without TVs at the East Campus Activities Building you may like better.

6. Please remove some of the cardio vision monitors on top of the treadmills. They block the view and many runners I noticed don't use them.

Please see answer to #5.

7. New weight stoppers in gym. (Pieces that hold weight on bars)

Thank you for your comment and concern for safety. We have removed the defective collars/clips for the bars and replaced them. Please let the Strength and Conditioning Room attendant know if you experience any issues in the future.
